

ENGINEERED TO OUTPERFORM

RWM, the original inventor and market leader of Kingpinless casters, continues to be a leader in reshaping the industrial caster marketplace. We are proud to design, manufacture and test all of our Kingpinless and custom caster products in the U.S.A. We understand heavy duty industries require products that will last under the continual wear and tear which occurs daily. RWM is ready to aid with heavy duty caster products which can be tailored specifically for customer's needs. At RWM, we believe in owning as much of the process as possible. Under this culture we have continued to implement production improvements including multiple plasma cutting tables, several robotic weld cells with pulse welding technology and our newest improvement which includes powder coating as a standard on core Kingpinless products. Don't see what you need, call us and we can probably make it for you.
