RWM's Fall Highlights

We've been staying busy and have some important updates that we are really excited for. For one, we recently implemented a Spanish translation feature on www.rwmcasters.com and fully translated the RWM product specification catalog! We also started a new Instagram account, so be sure to follow us there for an inside look at our operations and products. Read along for updated test reports and several new product highlights!

- New Spanish Catalog/Website
- Product Highlight: HD Cast Iron
- Improved Pneumatic Offering
- Core Coat Testing
- Ground Support Solutions
- Product Highlight: Torus Wheel
- New Instagram

New Spanish Catalog and Website!

RWM now has a Spanish translation feature on our website along with a fully translated Spanish catalog. To translate the homepage simply click the “Español” button at the top. To access our other pages in Spanish click select language and then choose Spanish. To find the Spanish catalog you can either go to our literature page or click the link below to download it.

Product Highlight: HD CI Wheels

RWM *Heavy Duty Cast Iron Wheels*

RWM Caster's heavy-duty cast iron wheels are made of reinforced material and a solid core design offering a substantial performance increase over inexpensive semi-steel wheels. These high-quality, heavy-duty cast iron wheels are durable, versatile, and heat-resistant. Due to their incredible durability, heavy-duty cast iron wheels are an excellent choice for bearing heavy loads in manufacturing and warehouse applications. Are your floors made of rough concrete, wood block, or other irregular surfaces? Then heavy-duty cast iron is ideal for these demanding conditions. Some specific uses appropriate for heavy-duty cast iron wheels include:

- High-temperature settings
- Manufacturing applications
- Warehousing applications

**Contact our factory for additional wheel options*

If you have a job that requires sustained durability for your wheels while withstanding heavy loads; then look no further, RWM's Heavy Duty Cast Iron wheels are the perfect solution. Through reinforced materials and a solid heavy core design Heavy Duty Cast Iron offers one of the highest ratings of any wheel, so when capacity is the name of the game, the HD CI wheel is a strong contender. These wheels are also a fantastic choice for applications that involve high temperatures as they are rated for use in temperatures of up to 800° F. These Heavy Duty Cast Iron wheels are also capable of enduring exposure to water, grease, oil, and any other chemicals they may come in contact with, making them ideal for outdoor operations. To learn more about the HD CI wheel check out the new page on our website or download the Heavy Duty Cast Iron Flyer below.

New & Improved Pneumatic Wheels

RWM's Pneumatic Wheels provide a smooth, impact-absorbing operation even across rough surfaces for important instruments and components. Even better, we've just upped our game by making a series of improvements to our wheel product line to offer more robust tire solutions at more competitive prices than ever before!

These wheels provide a cushioned ride that is perfect for sensitive materials that are being transported and provide the ultimate level of protection for more demanding towed operations. Our Pneumatic Wheels are suggested for indoor and outdoor use where a smooth ride is of utmost importance. RWM's Pneumatic Wheels offer the maximum in floor protection while being able to move freely over a multitude of obstructions and terrains such as cement, asphalt, dirt, gravel, rock, and grass. The most common application uses for this wheel can be found in the aerospace, ground support, shipping, and heavy manufacturing industries.

Updates to RWM's Core Coat Testing

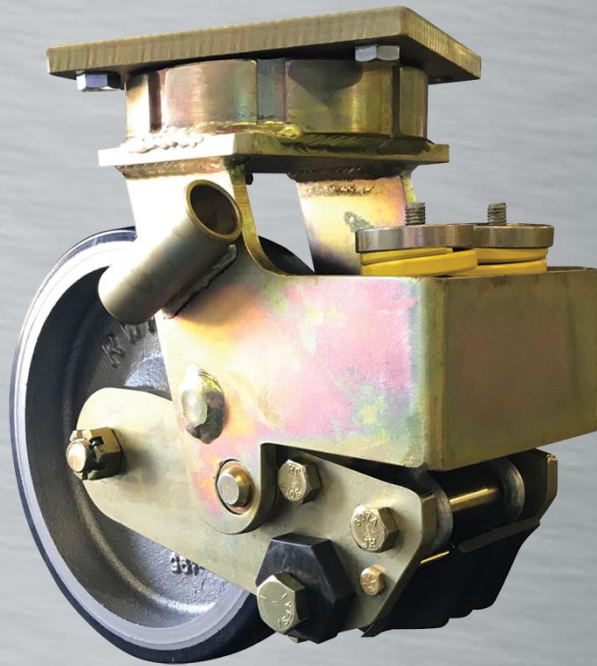

Back in 2016 RWM did some field testing to evaluate how an Iron Core with RWM Core Coat ("CC") matched up against a standard Iron Core and Aluminum Core wheel in terms of corrosion resistance. The experiment took these 3 wheels and left them outdoors with unprotected exposure to the elements for an entire year, simple right!? Now it has been almost 4 years since the original testing first took place - so we decided to re-examine the condition of the wheels again. This test proves that the Core Coat is the ultimate solution for protecting wheel applications involving long term exposure to the elements.

World Class Ground Support Solutions

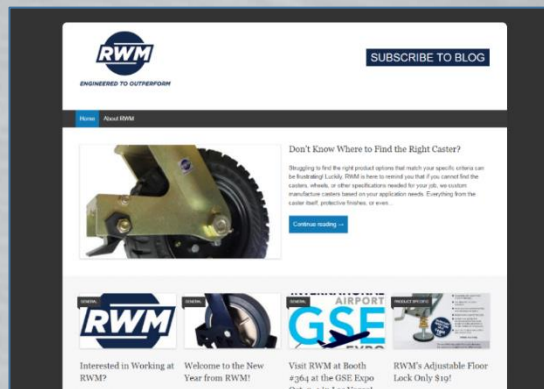

- *Kingpinless Casters*
- *Shock Absorbing Casters*
- *Custom Manufacturing*
- *Ground Support Applications*
- *Exceptional Towing Performance*
- *Premium PTMEG Polyurethane*
- *Military Spec, Powder Coat & Zinc Finishes*

RWM Casters is the originator and market leader of the Kingpinless caster. Kingpinless casters are the recognized best solutions for demanding tow and high impact applications to reduce downtime, eliminate FOD hazards and improve long term performance. RWM offers the highest quality U.S. made casters available while using the best rated materials in the industry. Don't purchase an inferior knock-off. Contact RWM Casters for the proven winning solution.

Don't Forget to Follow Our Blog!

RWM Caster's blog has recently been updated with new publications and major events that take place within the company. It has been incorporated into our main website and is now easier to navigate, subscribe, and follow. Each post contains photographs and links to PDFs or pages with the newest content. Product Highlight: Torus Wheels

The Torus Wheel™ offers a rounded tread that provides easy turning under heavy loads. The Torus Wheel™ features our premium PTMEG urethane tread and sealed precision bearings for maintenance free applications requiring optimal ergonomics. This means no de-bonding, no flat spotting, excellent floor protection, noise reduction, and enhanced rollability. All the features combine to ensure maximum service life especially in demanding continuous use applications. The Torus Wheel™ has an aluminum core that provides a lightweight, long-lasting attractive alternative to cast iron along with a variety of different sizes, colors, and wheel hardness to match any application.

The RWM standard Torus Wheel™ is the [Blue 92A](#) made specifically for towline applications and use in the automotive industry. Other configurations include a softer tread [85A](#) compound for optimal noise reduction and dampening, an [Electrostatic dissipative \(ESD\)](#) compound for sensitive electronics or other configurations to prevent static buildup, and a [70D](#) hard tread for the maximum ergonomic benefit.
